

Resources Division

Defense Medical Human Resources System-Internet (DMHRS)

What It Is...

DMHRSi reports current and future human resource needs for the Military Health System (MHS). It identifies staff and where they work. It also identifies filled and vacant positions, training records and all hours charged to each workcenter.

Key Features and Benefits

With 170,000 users worldwide, DMHRSi has the largest user base among the MHS. It has 22 data interfaces and is deployed to over 800 military medical sites. It:

- Integrates human resource data from multiple sources
- Reports personnel readiness data quick
- Tracks personnel education, training and labor costs

Highlight

Winter 2011: DMHR Si was the first Department of Defense project to adopt the Agile with Scrum Methodology to deliver application updates to users on time and within budget. Agile also helps increase productivity, while at the same time, reduce risks.

What Users Are Saying...

"[Availability is] Very good considering the amount of personnel using DMHRSi throughout the three services and all having the same deadline."

"I really like how it is now CAC enabled. Much easier and user friendly... Thank you."

"This system is easy to navigate."

"Working through the processes and procedures to make Agile Scrum a success for DMHRSi application teams continue to be a rewarding experience."
